

# Misconceptions and stereotypes about higher education

Despite the fact that education is an important part of social life, many do not want to enroll in universities. This is primarily due to the fact that of higher education there are plenty of stereotypes. This article will present some of these stereotypes.

## **To become successful, do not necessarily have higher education**

This fallacy arose in the 90s of the last century. Then in order to become successful, it was first and foremost a dedicated and strong person. [what is the best essay writing service](#) In those years, the market sold a huge number of fake diplomas. And that the presence of higher education ceased to bring great value.

## **If you have a degree, you can always build a career**

The person who really has a great ability, quick learner and committed to self-improvement, a diploma is a passport to a career. But man that is hard to understand the chosen discipline, not learning, and has a strong will, from the receipt of the diploma will receive significant benefits in finding a good job.

## **Many famous people have not received higher education**

A large part of famous people who never finished high school, had a pretty great ability in their interested field. Bill gates, for example, 13 years of self-assembled computer. Almost all the people who talk about the futility of education, do not have unique abilities. Having average intelligence and average ability, hard enough to succeed without education. A statement that education is not necessary for success, can be applied only to a small group of people.

## **Self education is always more useful than to study at University**

To educate ourselves is actually very useful for the mental development of human abilities.

Indeed, only sincere interest in knowledge can help quickly learn the material. But this approach to education has disadvantages. By self-study knowledge is often obtained without the system. Often, people who teach themselves can't get an accurate representation of any objects. In such cases, there is the danger to fall under the power of popular pseudoscientific theories and misconceptions. It is best to combine the class self-education with study at the UNIVERSITY. Then the grades will be better, and knowing I t to be absorbed easier.

## **The University should do only after school**

This is not always the right decision. Such students enter University because of pressure from their relatives or friends. But often such students expelled for academic failure, truancy, and other violations. Many students who disliked learning, after graduation, choose to work not on a speciality.

## **To summarize**

Despite the fact that these misconceptions have serious grounds, they are not entirely correct. A lot of people believe in them. But these stereotypes are often far from the truth. You should always analyze the situation independently, in order to avoid errors.
