

The dream of modern girls when choosing a career

The girl students were asked to rate the attractiveness of each of them in various spheres of professional activity. The most attractive area 13 points, the most attractive is 1 point and other points, accordingly, occupy an intermediate position. This allowed us to identify the ratio of students to different fields of professional activity.

The results of sociological surveys in the field of choice of profession girls

The data indicate a high orientation of graduates in professions associated with the market economy (lawyer, economist, businessman etc.) among 9-classic and 11-of classic relatively became more focused on the profession of specialists, less for professions of employees, and especially workers. Girls especially focused on trade non-productive sphere. The most attractive spheres for girls is the education for boys health.

The youth of today largely are not able to inherit the wealth of their parents, who grew up in a stable environment of socialism, did not know such social ills as unemployment, drugs, social inequality, deprivation. The obtained results last social.polls show that after a short period of decline there is a growing interest of youth to education. The problem of education, that's what worries today, young is much more than, for example, relationships with loved ones, peers, parents or teachers.

So, it was revealed that the overwhelming majority of 91.5 graduates are going after school to continue their education want to go to work immediately after high school is small, only 2.4 of the respondents. A small proportion was not defined with a choice, 6.2 respondents. Moreover, this distribution is retained in both urban and rural areas of the study. Students plan after graduation to go to work, the proportion with a reference in the future to work in a state enterprise will be 23%.

The most important factors in preparation for admission to the school for modern girls is:

- The desire to get a profession that you like ; 91.2% of
- The possibility of a better financial security after graduation ; with 82.2%
- The ability to implement ability ; 75.2 per cent

Variants of "Most likely to be enrolled in this school" and "Good academic performance in major disciplines in the school" respectively of 68.3% and 68% of the respondents, the identity of the data indicates the company's stable relationships of these factors for the successful admission and study.

Among the factors that do not play any difference in preparation for admission to the school "leaders" are such values as:

- The continuation of family traditions ; 52,6%
- The opportunity to find a life partner ; 24,8%
- The opportunity to live student life ; 21.6% of the

Note that, such factors as: a love of learning, participation in school clubs and competitions, the ability to do science among the respondents caused indifference.

Crucial, the activity of youth, its ability and the ability to fight for the realization of their aspirations and life plans.

Among the reasons that continuing education is essential to share gostitelj motives such as high earnings, job growth, prestige of the profession, the value of material well-being occupies in the value [choose an essay writer online](#) system of students of high rank.

First place in the gradation values of today's youth is the opportunity to continue to earn money. Least modern graduates interested in recognition of their family, friends as persons. High orientation to higher education and entry into the social layer of professionals, a focus on the work of the profession in students of class 2 is completely absent, and the ninth is very low.

The effectiveness of profibre is largely determined by the level of development of life orientations, the ability to evaluate the events and to carry out the regulation of its own activities and behavior.
