

The introduction of electronic educational classroom magazines school

Almost ninety percent of teachers who already work with electronic journals (instead of print counterparts) claim about the necessity of this innovation, thus underlining its importance and timeliness. If we analyze the results obtained in the course of the sociological survey, the attitude of teachers to this educational project, in General, positive.

The majority of teachers noted that with the advent of electronic cool logs logging easier, saves time, no need to worry about the design, can be assigned homework, observations. Teacher through the use of the tablet can go into services and make notes at any time during the lesson, while in any place of a Cabinet. The teacher too is not bound in the training desktop. Teachers or, for example, Tutors for mathematics in grade 6, ninth, eleventh grade, has repeatedly emphasized the fact that due to excessive "scribbling" lessons from the creative gradually turned into a mechanical.

During the experiment it was also proven that the savings printed counterparts cool journals made serious indicators from 60% to 75%. Greatly saving working time of a teacher. Now you do not need to spend a lot of time generating reports. All of this can make an educational service. You only click on the button in the program and a report will be prepared every second and do not want to show interest, sitting for a long time with a calculator in hand! Increase preparation time for lessons, which of course will lead to increased academic achievement in subjects.

Experiment on the introduction of cloud-based educational services continues as there is ongoing debate about their necessity. But we will celebrate the fact that school education has stepped into a different era and the requirements for the modernization of the educational process has changed due to the introduction of the FSES. Complete care, from keeping cool paper log needs to happen, then there will be announced the final results.

Recall that the replacement of paper magazines on tablets is already happening in some regions of Russia. Participants in the experimental introduction of innovations were teachers and other professionals (teachers of Russian language in Irkutsk, Altai, Khabarovsk territory, Sverdlovsk region etc.). So in Yekaterinburg by order of the Department of education cancelled keeping paper journals. 14 educational institutions actively implementing the IR technology in the educational process were given a tablet computer with an installed output in the system of educational information. According to the analytical observations, this innovation will contribute to the development of a network of educational institutions, will lead to transparency in the educational process, focus, and optimizes educational resources.

The advantages of electronic class registers should include full awareness of the pedagogical load, the amount of homework. School e-journals allowed us to establish close contact with all actors involved in the educational process and [where to buy an essay online](#) institutions, using the resources of mobile communication, Internet, email, and more. To prepare, to shape, to send all types of reports (performance, attendance, results of diagnostics of quality of knowledge) necessary to summarize and develop further the educational process in General.
